Application/Control Number: 09/987,822

Art Unit: 1714

The amendment received 29 May 2007 has been made of record. Claims 1 and 3-42 are pending.

Upon further consideration and the discovery of new teaching references, the indicated allowability of claims 1 and 3-29 contained in the previous office action is withdrawn. Prosecution on the merits is hereby reopened.

The rejection under 35 USC 102 contained in the previous office action is withdrawn.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1 and 3-42 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nakaya et al in view of Degussa Vestagon product literature.

Nakaya et al disclose aqueous dispersions suitable for powder coating applications. These dispersions are taught as comprising blocked isocyanate resins which are taught as being melt blended with acrylic resins containing carboxyl and hydroxyl groups. These carboxyl groups are taught as neutralized and thus are seen as salted. Hydroxyl values for the acrylic resins are taught by way of example as 69 at Table 1. Hydroxyl values are conventionally expressed as mg KOH per gram of polymer and, therefore, this value would translate to approximately 1.2 meq per gram.

While the Tg of the isocyanate resins is not explicitly recited, it is the position of the examiner that the Degussa product literature demonstrates that Tg's within

Art Unit: 1714

applicants' claimed range are common, if not predominant, for blocked isocyanates in the field of powder coating applications.

It would have been obvious to utilize blocked isocyanate resins with Tg's within applicants' claimed range since such resins are typical for powder coating applications.

Applicants limitations to corrosion resistance, gloss retention etc are seen as inherent since the chemical limitations are met.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Edward J. Cain whose telephone number is (571) 272-1118. The examiner can normally be reached on M-F from 10:00 to 6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Vasu Jagannathan, can be reached on 571 272-1119. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
